Welk silhouet hoort bij welke dino?

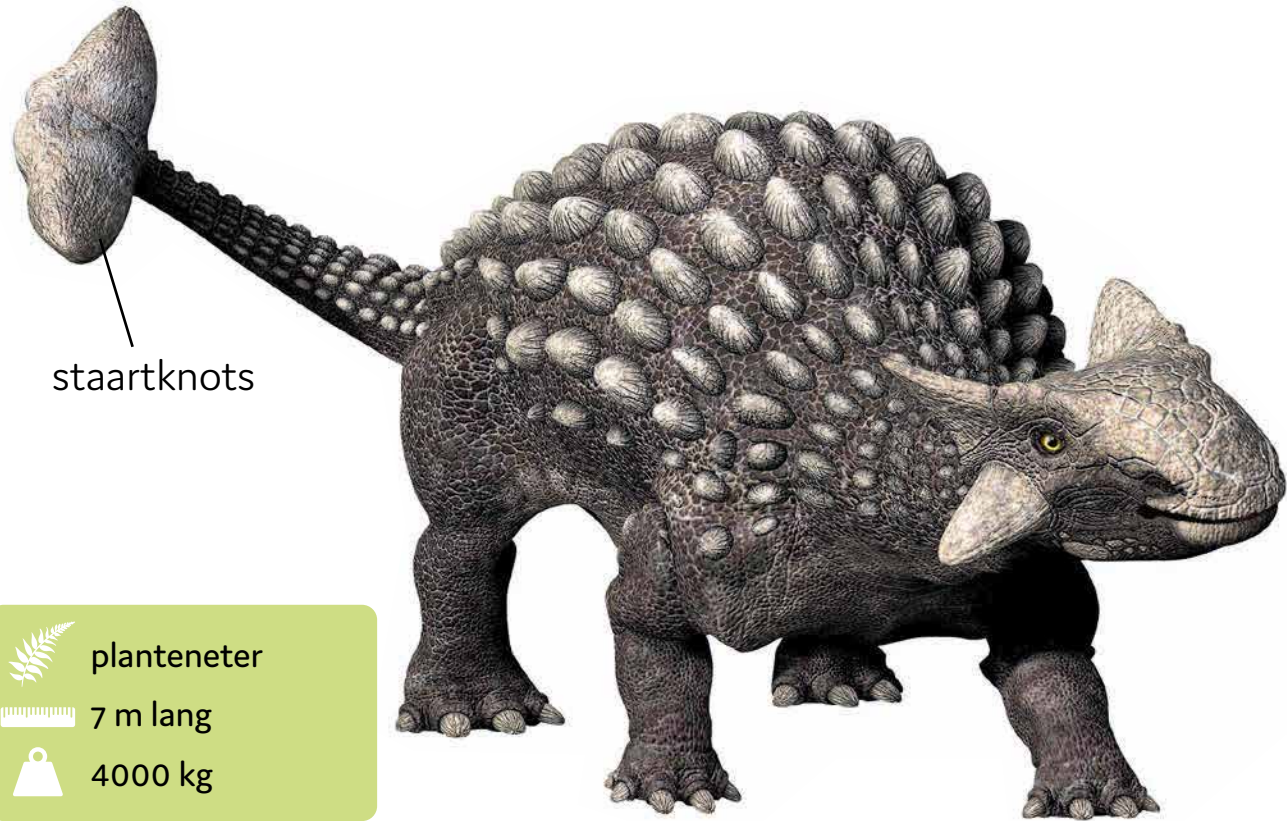

Landdinosauriërs

Plantenetende dinosauriërs zoals de Apatosaurus werden constant bedreigd door aanvallen van vleesetende dinosaurussorten.

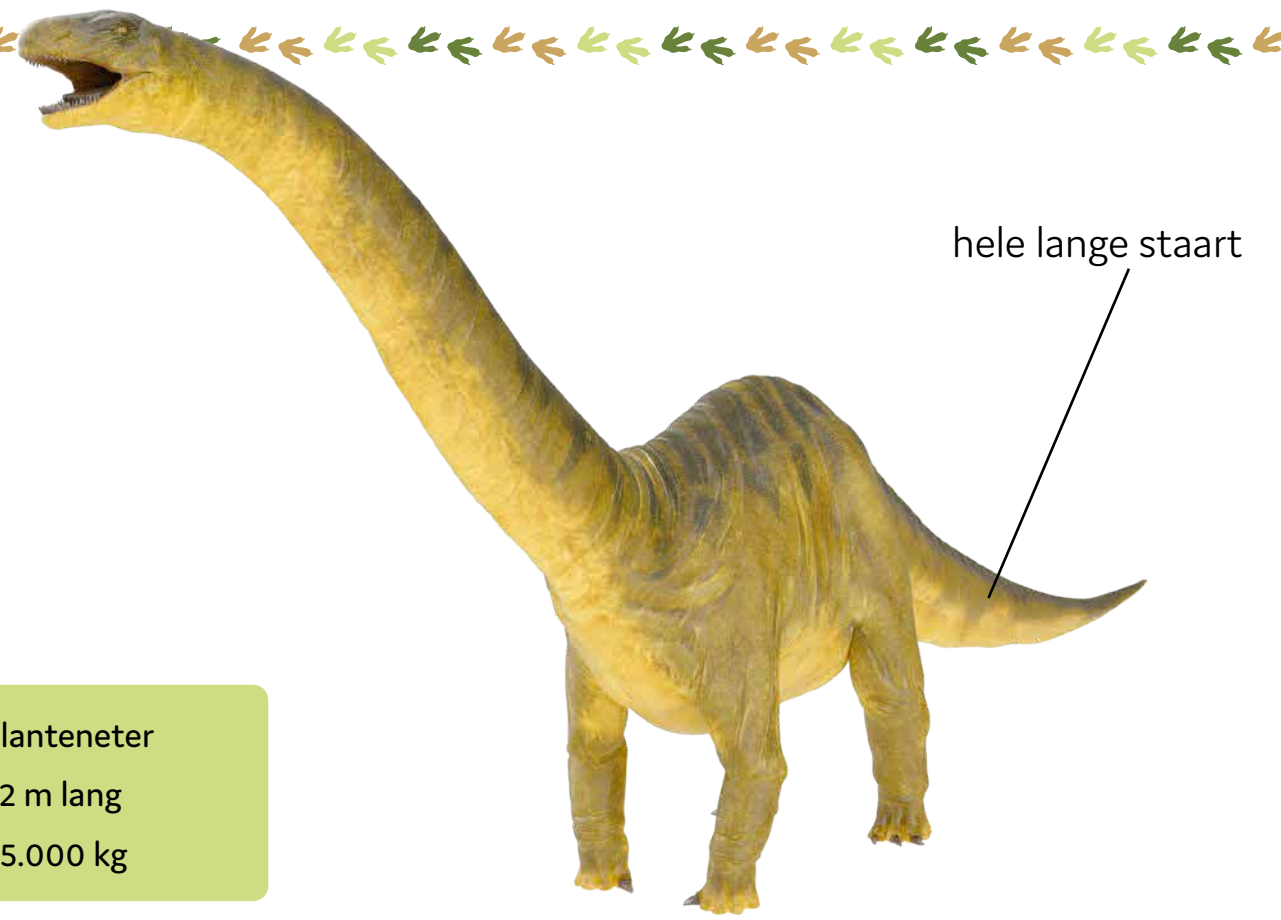

Dinosauriërs leefden op het land, maar sommige van hun verwanten vlogen door de lucht (pterosaurussen) of zwommen in de zee (plesiosaurussen).

Een Tyrannosaurus rex rent op een grazende Apatosaurus af.

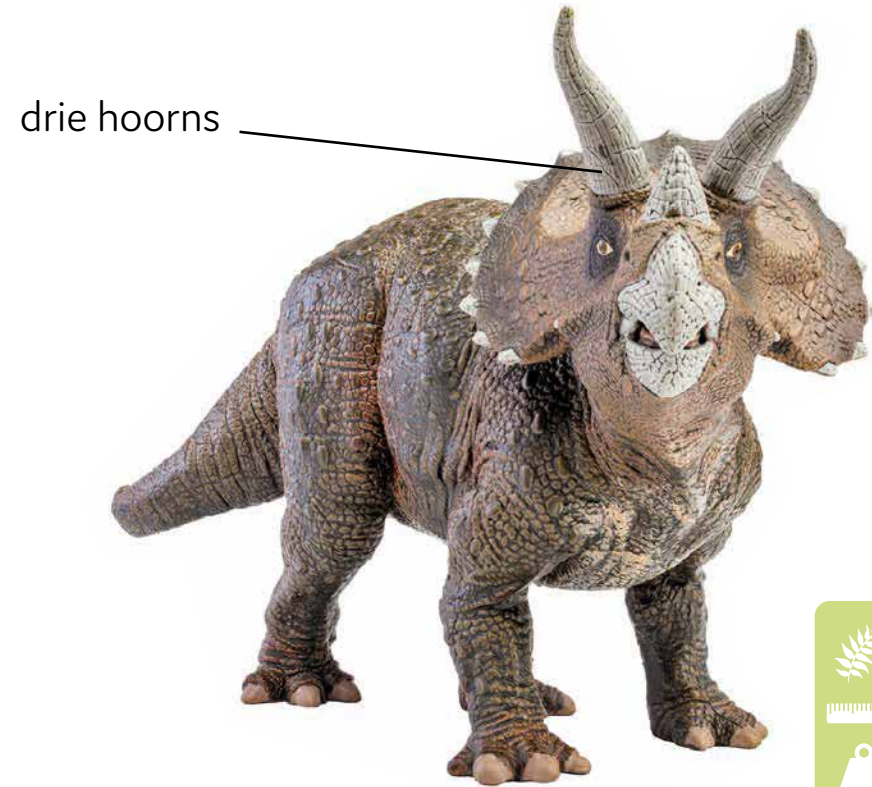

planteneter
7 m lang
4000 kg

Ankylosaurus

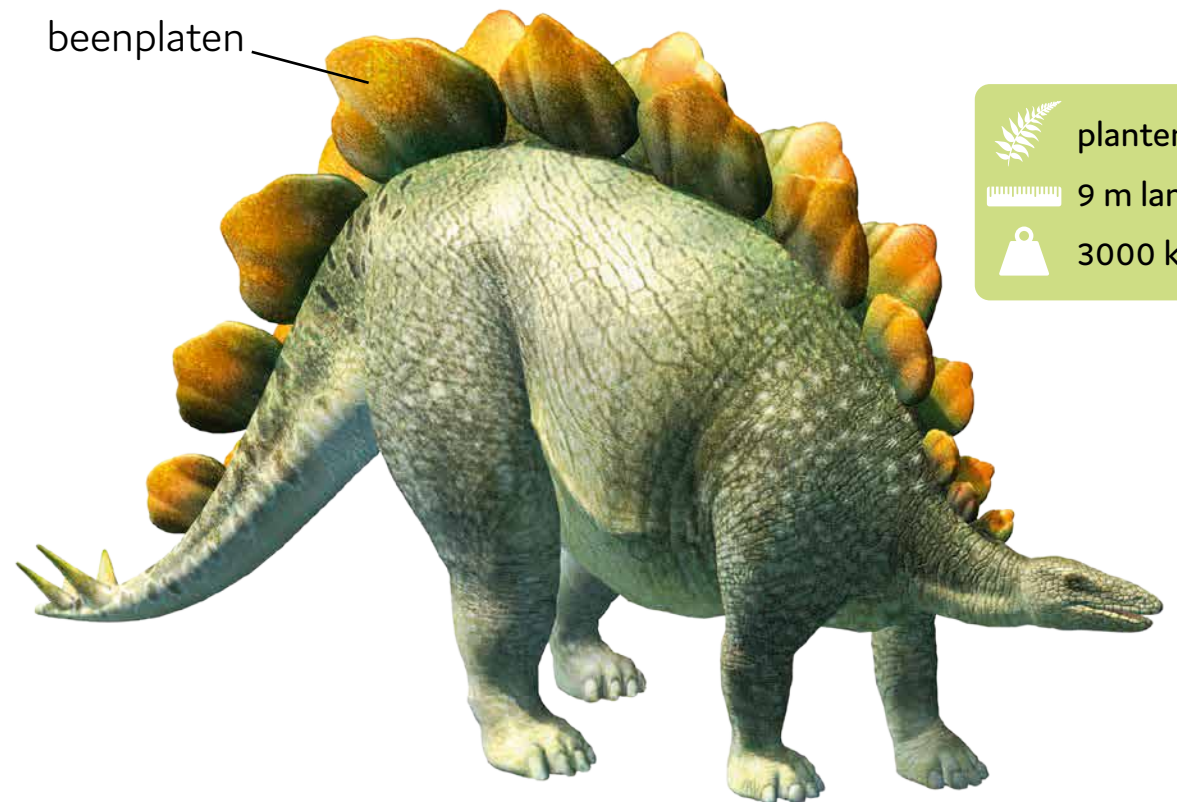

planteneter
22 m lang
35.000 kg

Apatosaurus

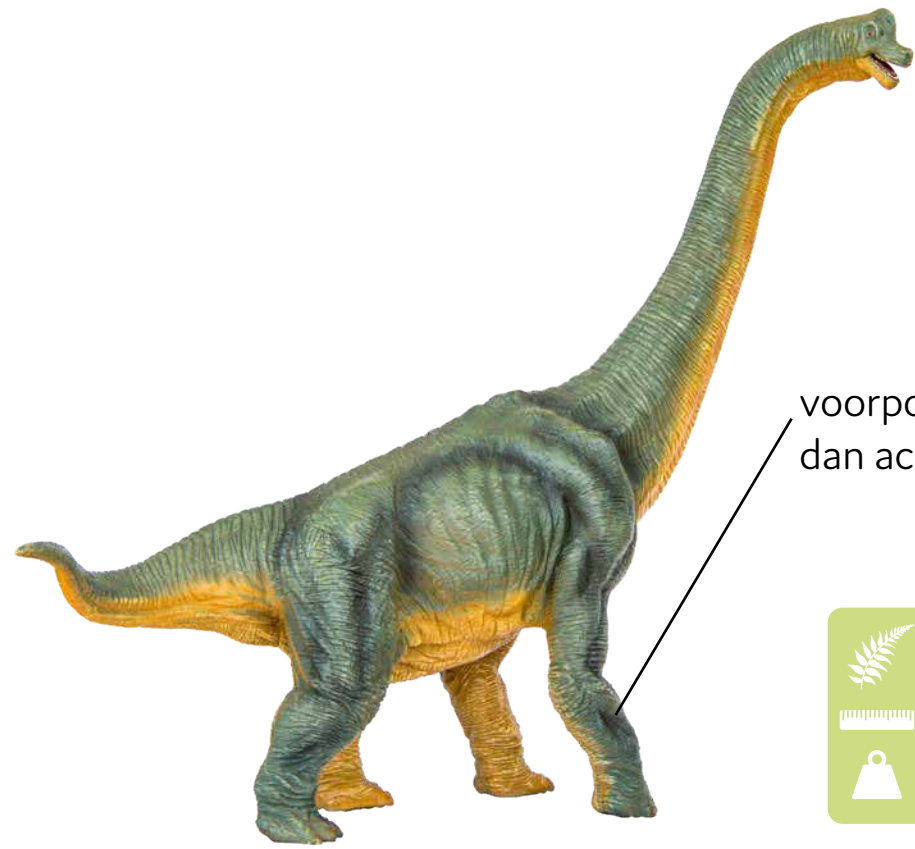

planteneter
9 m lang
6000 kg

Triceratops

planteneter
9 m lang
3000 kg

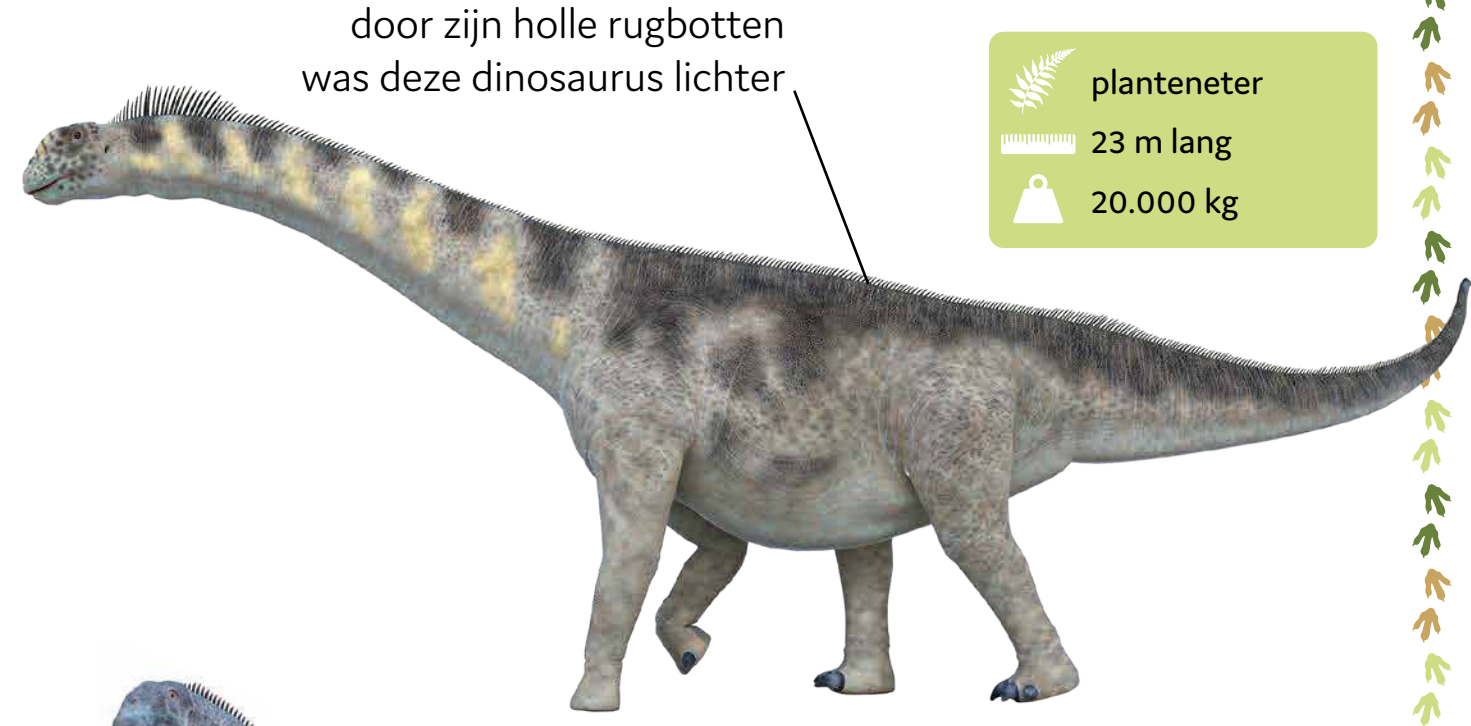

Stegosaurus

voorpoten langer dan achterpoten

planteneter
 30 m lang
 45.000 kg

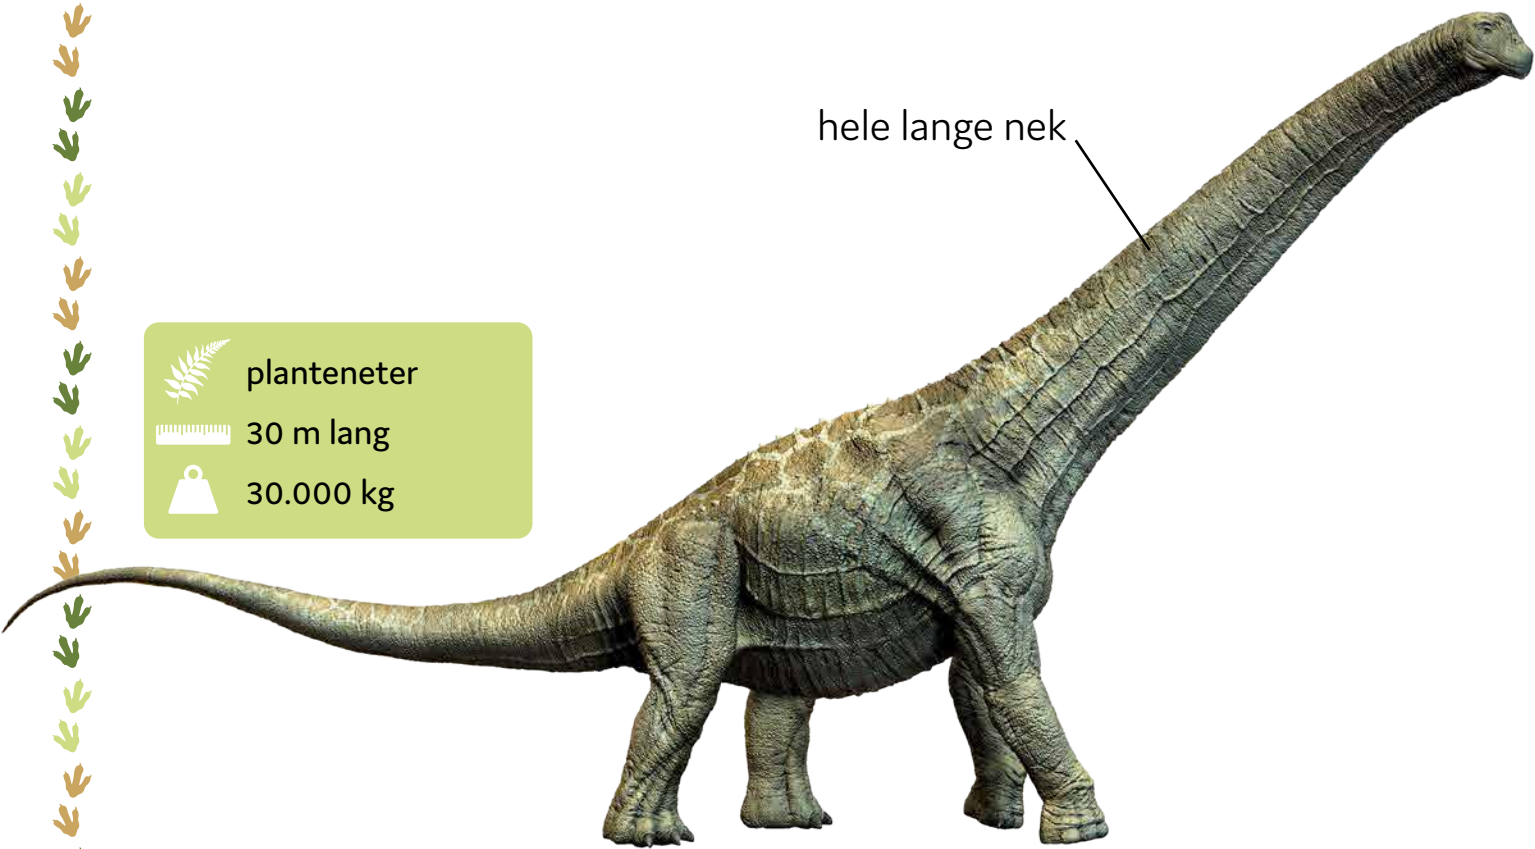

Brachiosaurus

door zijn holle rugbotten was deze dinosaurus lichter

planteneter
 23 m lang
 20.000 kg

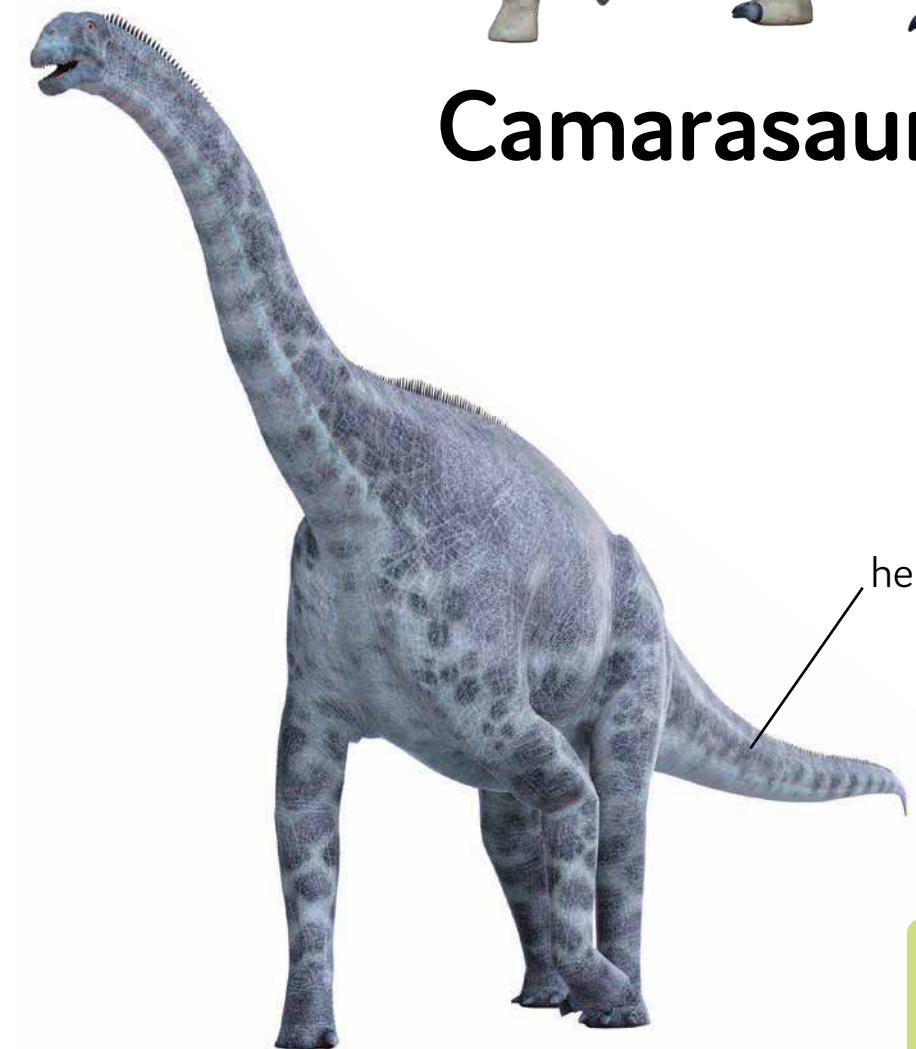

Camarasaurus

hele lange nek

planteneter
 30 m lang
 30.000 kg

Alamosaurus

hele lange staart

planteneter
 18 m lang
 11.000 kg

Cetiosaurus
