

# **THE MODERN STATE OF THE FUTURE**

**Önder Demir**

## **Table of contents**

Introduction .....	6
The basic principles of the modern state .....	8
The role of artificial intelligence .....	10
The Social Foundation of the Modern State.....	14
Future without fear – security for every citizen .....	16
A fair distribution of resources .....	18
The Philosophy of Life in the Modern State .....	20
Constructive thinking and action in the modern state .....	21
A state of unity – unification instead of separation .....	23
Conscious living and quality of life in the modern state .....	25
Direct democracy in the modern state .....	27
Cost savings through the modern state .....	29

The Modern State and Global Cooperation .....	31
Global unity and the abolition of borders .....	33
The role of artificial intelligence in the modern state .....	35
The responsibility of states and the impacts .....	37
The cosmic laws and the consequences of exploitation .....	39
The ignorance of the Cosmic Laws and their consequences.....	41
Enlightenment and Overcoming the Ego .....	43
Responsibility instead of exploitation .....	45
The Divine Law and its Effects .....	47
The Cosmic Laws in the Proverbs of the Peoples .....	49
The radiation of energy – positive or negative? .....	51
The end of manipulation and simulation .....	53

Education as the key to the ideal society .....	55
The end of temporary work: A right to permanent jobs .....	57
Education for all: The key to a just future .....	59
The Modern State and the Abolition of Punishment .....	62
The Technology of the Modern State .....	65
The education system in the modern state .....	68
Closing words .....	70

## **Introduction: The need for a new vision**

In today's world, we are accustomed to government structures that do not necessarily promote our well-being. Our working hours are rigid, societal expectations are high, and many people struggle with the constant stress that comes with getting up early and living a hectic daily life. A system that, in many ways, appears inflexible and outdated shapes our reality. But what if we could design a government dedicated to the well-being of its citizens? A government in which happiness and quality of life are central, a government that breaks free from traditional structures and focuses on what matters most: the well-being of each individual and that of society as a whole.

In this book, I want to present a vision for a modern state that uses technological progress, especially artificial intelligence (AI), as a central building block for a fairer and happier future. A state in which people are no longer forced to wake up at 5 a.m. or students hear their alarm clocks at 7 a.m. A state in which the quality of life of its citizens is the top priority. In a world increasingly shaped by technology, how can this technology help create a society that functions in harmony with the needs of its members?

Artificial intelligence plays a key role in this. It's not just a tool for automation and increased efficiency but can act as an intelligent partner that helps us make better decisions, free ourselves from rigid time management, and focus as a society on the true values of life: freedom, creativity, and prosperity for all.

This book is an invitation to think beyond the status quo and glimpse a future in which humans and technology work together harmoniously. A future that may still seem utopian today, but is entirely attainable if we are willing to redefine our ideas about work, education, prosperity, and quality of life.
